MANZANILLO OLIVE The most popular table olive in CA., Manzanillo is a large, round freestone with a high flesh to pit ratio. As the Spanish Manzanillo olive ripens, the flavor becomes fruitier and less bitter, but the water content increases making it better suited to curing than extracting. The Manzanillo tree is moderately vigorous with a spreading growth habit and medium density. Though partially self-fertile, yields will increase when Manzanillo is pollenized by Sevillano or Ascolano. This variety is moderately cold hardy.

FROST™ PEACH Resistant to peach leaf curl (10 year trials at Washington State Univ.). Delicious yellow freestone. Slight red blush over greenish yellow to yellow skin. Heavy bearing, excellent for canning or eating fresh. July ripening. Showy pink bloom in spring. 700 hours. Self-fruitful.

Q-1-8 WHITE PEACH Peach leaf curl-resistant variety, tested at the WSU research station at Mt. Vernon, Washington. In the Dave Wilson Nursery orchards, the white-fleshed, semi freestone fruit is sweet and juicy like Babcock, with a more sprightly flavor. Harvest mid to late July in Central CA. Showy blossoms. 700-800 hours. Self-fruitful.
