ARBEQUINA AS1® OLIVE Commercially planted in super high density orchards, the low-vigor Arbequina olive tree bears fruit earlier than Traditional varieties. When planted in a wider spacing, this variety will exhibit a spreading, somewhat weeping canopy and grow to a medium size. Prized for its mild oil, the Arbequina olive is small and yields a very aromatic and fruity flavor that is low in bitterness. The tree is fairly disease-resistant and pest-tolerant. Arbequina is self-fertile, but produces higher yields when planted with a pollinizer such as Koroneiki or Arbosana.

The Manzanillo tree is moderately vigorous with a spreading growth habit and medium density. Though partially self-fertile, yields will increase when Manzanillo is pollinized by Sevillano or Ascolano. This variety is moderately cold hardy.

MISSION OLIVE The Mission olive is a large, erect tree used for table olives and olive oil production. This variety is tolerant of cold, salinity and drought.
