

# Peach Harvest Sequence for Home Gardens

The First Name in Fruit Trees™

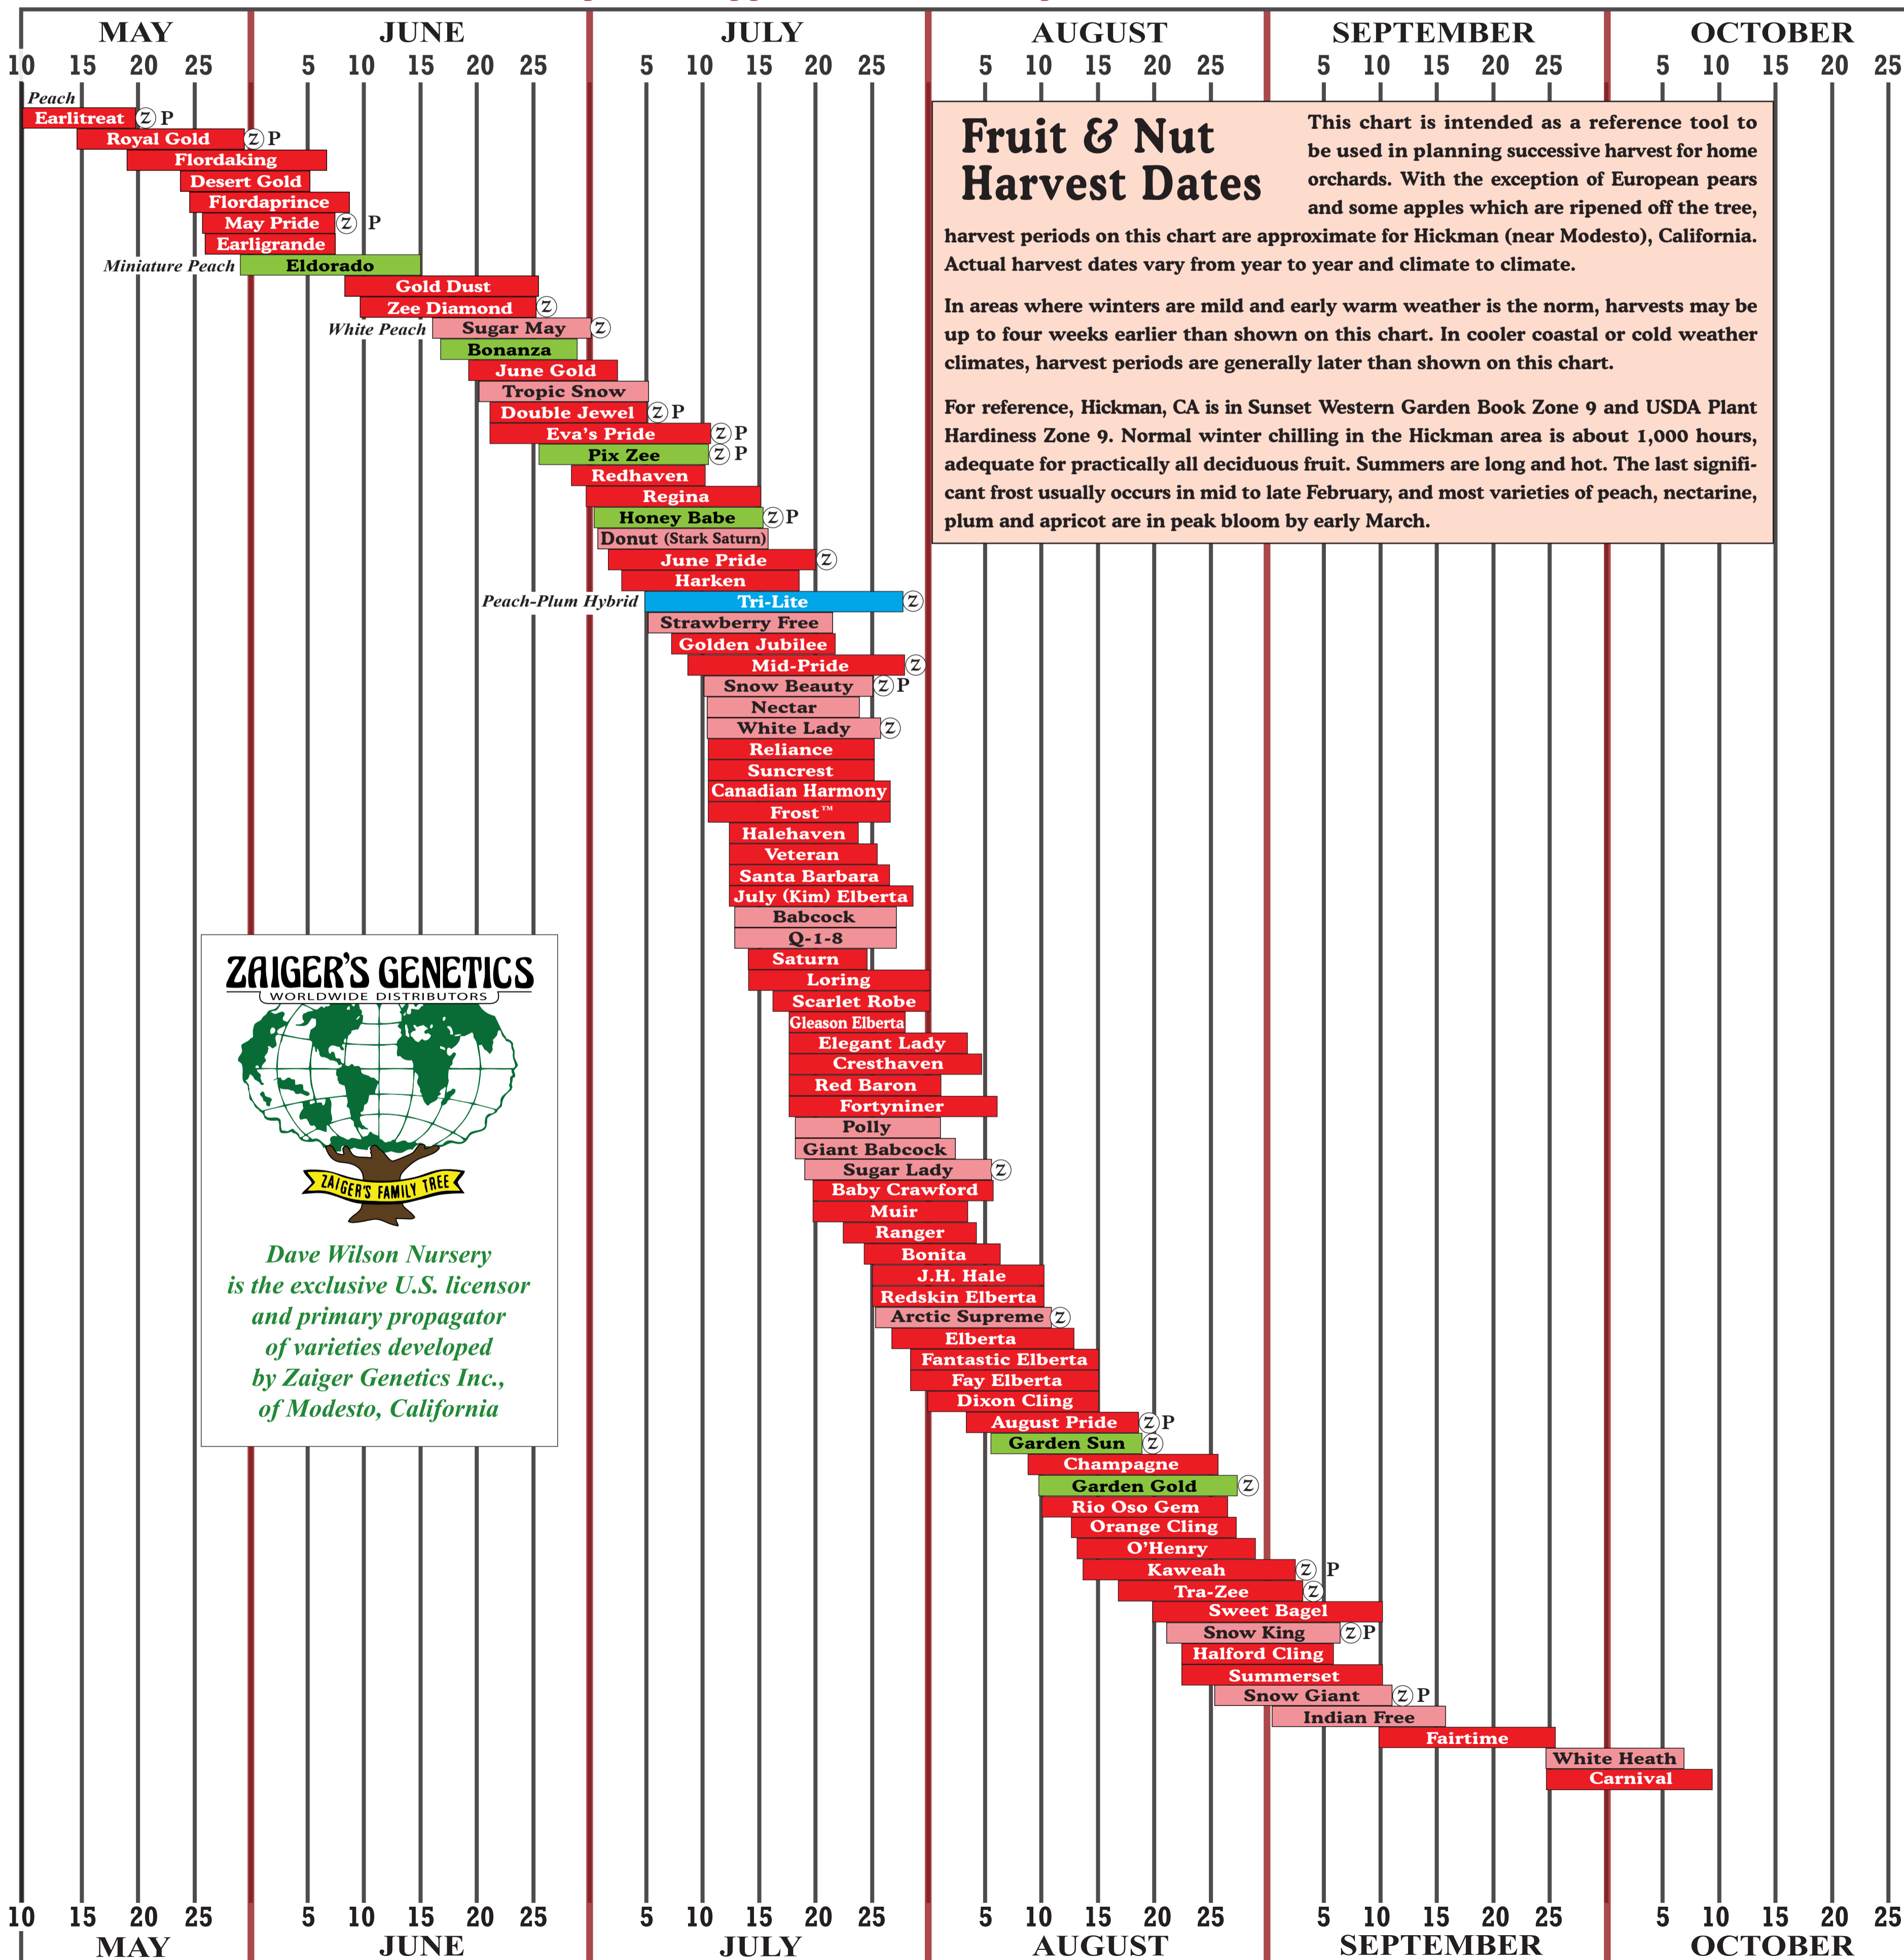

Color Bars correspond to approximate harvest periods for Hickman (near Modesto) California.

**Yellow Peach**

**White Peach**

**Peach-Plum Hybrid**

**Miniature Peach**

**Fruit & Nut Harvest Dates**

This chart is intended as a reference tool to be used in planning successive harvest for home orchards. With the exception of European pears and some apples which are ripened off the tree, harvest periods on this chart are approximate for Hickman (near Modesto), California. Actual harvest dates vary from year to year and climate to climate.

In areas where winters are mild and early warm weather is the norm, harvests may be up to four weeks earlier than shown on this chart. In cooler coastal or cold weather climates, harvest periods are generally later than shown on this chart.

For reference, Hickman, CA is in Sunset Western Garden Book Zone 9 and USDA Plant Hardiness Zone 9. Normal winter chilling in the Hickman area is about 1,000 hours, adequate for practically all deciduous fruit. Summers are long and hot. The last significant frost usually occurs in mid to late February, and most varieties of peach, nectarine, plum and apricot are in peak bloom by early March.

**ZAIGER'S GENETICS**  
WORLDWIDE DISTRIBUTORS

Dave Wilson Nursery is the exclusive U.S. licensor and primary propagator of varieties developed by Zaiger Genetics Inc., of Modesto, California
