

Low-Chill Fruit & Nut Varieties

Estimated winter chilling requirements of 500 hours or less

In parentheses after each variety name are shown the estimated winter chilling requirements (hours of temperatures below 45°F required to set a satisfactory crop) and the pollination requirements.

SF means self-fruitful (or partly self-fruitful) in most climates of the western U.S. PR means pollinizer required. □ indicates varieties having chilling requirements of approximately 300 hours or less.

Miniatures

- GARDEN DELIGHT NECT.(500, SF)
