The First Name in Fruit Trees™

DAVE WILSON NURSERY FRUIT & NUT HARVEST DATES

This chart is intended as a reference tool to be used in planting successfull harvest for home orchards. With the exception of European pears and some apples which are ripened off the trees, harvest periods on this chart are approximate tree-ripened harvest periods for Hickman (near Modesto), California. Actual harvest dates vary from year to year and climate to climate. In areas where winters are mild and early warm weather in the spring, harvest may be up to four weeks earlier than shown on this chart. In center coastal or inland valleys, climates harvest periods are generally later than shown on this chart.

For reference, Hickman, California is in Sunset Western Garden Book zone 9, and USDA Plant Hardiness Zone 9. Normal winter chilling in the Hickman area is about 1,200 hours, adequate for practically all deciduous fruit. Summers are long and hot. The last significant frost usually occurs in mid to late February, and most varieties of peach, nectarine, plum, and apricot are in peak bloom by early March.
