Planting Patterns

SQUARE

distance between rows and between trees is approximately the same

HEDGEROW

distance between trees in a row is much closer than in any other pattern

DOUBLE

interplanting a tree in the center of four trees in a square planting

TRIANGLE (DIAMOND)

all trees are the same distance from each other

Trees Per Acre - Square & Hedgerow Plantings

Tree Spacing – Distance between trees within the row (feet)

Row Spacing – Distance between Rows (feet)	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

To Find the Number of Trees Per Acre

SQUARE OR HEDGEROW PLANTINGS: Multiply the distance between rows by the distance between trees and divide into 43560

TRIANGLE PLANTINGS: Multiply the distance between trees by itself (square the distance between trees), divide into 43560 and add 15% to the result of the division.

DOUBLE PLANTINGS: Divide the distance between two interplant rows into 208. Divide the distance between two trees within a single row into 208. Add the results of these two divisions. Save this number for the last step. Multiply the distance between rows and divide into 43560. Double this number and reduce it by the sum of the two divisions.
